# 3D RF Testing at its Best

The new IsoLOG 3D Mobile PRO, Aaronia's latest development, is an extremely light and small isotropic antenna compatible with any spectrum analyzer. Ready "on the fly", it offers a suitable plug and play solution for 3D measurements in limited time frames.

The antenna requires no software installation, no power connection and no changes to the hardware. Via the N (male or female) connector, it can be connected with any analyzer or oscilloscope.

The IsoLOG 3D Mobile PRO is available in three different versions:

- ▶ 9 kHz - 3 GHz (IsoLOG 3D Mobile 9030 PRO)
- ▶ 9 kHz - 6 GHz (IsoLOG 3D Mobile 9060 PRO)
- ▶ 9 kHz - **8 GHz** (IsoLOG 3D Mobile 9080 PRO)

## Hardware

Each IsoLOG 3D Mobile PRO includes an internal, rechargeable battery (offering an operating time of approx. 6 hours), and switchable low-noise bypass single or dual pre-amplifiers (+15dB each (@2GHz)).

The two integrated amps allow the measuring of even extremely weak signals. Thus, used in bypass mode, the antenna is still usable amidst high field strengths. The antenna is controlled either via USB, or a manual antenna selection mode which requires no USB connection. The IsoLOG 3D Mobile PRO also features a built-in, ultra-fast and adjustable "chopper" function: Using special, glitch-free RF switches, this feature offers an automatic endless antenna rotation / selection with a switching duration of up to 50 kHz. This transforms the IsoLOG 3D Mobile PRO into a fully functional 3D antenna without the need for any USB software control.
